

The original endpoint residue survives as an arithmetic prime-boundary coordinate

$$r_t = \sqrt{\pi t} e^{-1/(4t)}/8$$

Both resonant moments

Adjoint cosine test

$$e^{-Z^2/(4t)} \cos(Z/(2t)), \quad t = 1/4$$

Original ζ : $\text{Res}_{s=1} \zeta = 1$
 $16H_0(i) = 1$ with every factor retained

ER4, ER7

$[H_t] = [1/16] \neq 0$ in $S'/N_t S'$
 $N_t I = H_t$ has no tempered solution

ER24-26

Retained source $(L_t, -4, 0)$ or $(L_t, 0, -4)$
 in $S'_{\text{even}} \oplus \mathbb{C}B_+ \oplus \mathbb{C}B_-$
 Both map to H_t ; their difference is retained.

$$h_t = e^{-Z^2/(4t)} H_t(Z) \cos(Z/(2t))$$

$$\beta[(t_p - 1) \otimes h_t] = \ell_p \otimes (H_t(0), r_t)$$
